

Aniket Sapakal

DATA SCIENCE / MACHINE LEARNING — ENTRY LEVEL

Pune | +91 7666392893 | aniketsapakal10@gmail.com

[LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

IT graduate certified in Data Science with hands-on experience building end-to-end Machine Learning projects — from data ingestion and model training to Flask-based deployment — plus a Power BI dashboard for business analytics. Comfortable with Python, Scikit-learn, SQL, and core DBMS/OOPs concepts. Seeking an entry-level Data Science / Machine Learning role to build and deploy data-driven solutions.

TECHNICAL SKILLS

- **Machine Learning & Data Science:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn (basic), end-to-end ML pipelines
- **Programming Languages:** Python, SQL, C (basic), JavaScript
- **Frameworks & Deployment:** Flask, Docker, AWS S3, Git/GitHub
- **Data Analytics & Visualization:** Power BI, Microsoft Excel
- **Database & Backend:** MySQL, Django ORM, DBMS
- **Core Concepts:** OOPs, Data Structures & Algorithms, REST APIs (basic)
- **Tools & Platforms:** Jupyter Notebook, VS Code
- **Other Skills:** Problem-solving, Debugging, Presentation Skills

PROJECTS

Student Performance Prediction System [\[GitHub\]](#) — *Python, Flask, Scikit-learn*

- Built an end-to-end Machine Learning application that predicts students' math scores from features such as gender, parental education, lunch type, test preparation, and reading/writing scores.
- Handled the full ML workflow — data preprocessing, model training/selection, and evaluation — inside Jupyter notebooks before productionizing it.
- Deployed the trained model behind a Flask web app so users can input student details and get real-time score predictions.

Phishing Website Detection using Machine Learning [\[GitHub\]](#) — *Python, Scikit-learn, Flask, Docker, AWS S3*

- Built an end-to-end ML system to classify phishing vs. legitimate websites using network/website-based features.
- Implemented a modular pipeline covering data ingestion, validation, transformation, model training, and prediction.
- Containerized the app with Docker and integrated AWS S3 and CI/CD (GitHub Actions) for cloud deployment.

HR Analytics Dashboard — Power BI [\[GitHub\]](#) — *Power BI, Excel*

- Designed an interactive Power BI dashboard analyzing employee performance, workforce distribution, salaries, attendance, and experience levels.
- Built interactive filters and visualizations to help HR teams and management make data-driven workforce decisions.

EDUCATION

Bachelor of Information Technology — Shivaji University, Kolhapur (Islampur)

Grade: A | 2026

CERTIFICATIONS

Data Science | Python | Web Development
